SECTION I

WELFARE DIVISION

Cooperative for American Remittances to Europe, Inc. (CARE)

Several inquiries have been received by Public Health and Welfare Section regarding the status of CARE, Inc., operations in Japan.

CARE, Inc., was issued a license to operate in Japan on 21 August 1947, however, their operations have not been extended to this theatre as of this date.

It is contemplated that the first CARE packages (food only) will arrive in Japan during the next month (ETA 25 June). The contents of the food package (Oriental pack) will consist of the following items:

Flour	2 lbs	Raisins	1 lb
Rice	5 lbs	Egg powder	8 oz
Kidney beans	1 lb	Chocolate	8 oz
Miso	2 lbs	Cocoa	8 oz
Shoyu	1 pint	Milk (powdered)	1 lb
Vegetable oil	24 oz	Sugar	2 lbs
Beef (in natural juice)	15 oz	Salt	2 lbs
Canned fish	15 oz	Soup (concentrate)	1 $\frac{1}{4}$ oz
Apricots	1 lb	Soap	6 oz
Wash cloth	1 piece		

The cost of this food package is ten dollars (\$10.00). The receipt and acceptance of each ten dollars (\$10.00) remittance by CARE, Inc., (address: 50 Broad Street, New York (10), New York) obligates them to effect delivery of the food package to an addressee, in Japan, as named by the remitter, with a signed receipt from the addressee being transmitted to the original donor as evidence of the requested delivery being made. Whenever a food package is undeliverable, the donor will be notified and at the same time his remittance will be returned.

NOTE: CARE, Inc., is not receiving remittances for Japan at this time. As soon as CARE operations are officially extended to include Japan, official notice will be given through the Public Health and Welfare Weekly Bulletin, Stars and Stripes and Japanese press.

Licensed Agencies for Relief in Asia (LARA)

LARA relief supply shipments, numbers 71 and 72, arrived in Yokohama and consisted of the following supplies:

71st Shipment: Arrived aboard the S. S. Princeton Victory on 1 May and contained 1.54 tons (clothing).

72nd Shipment: Arrived aboard the S. S. Philippine Transport on 1 May and contained .57 tons (clothing, including shoes, .14 tons - soap, .08 tons - miscellaneous, .35 tons)

Restricted

Restricted

The total LARA relief supply shipments to Japan now amounts to 4,516.98 tons, consisting of the following:

Food	3,396.48 tons
Clothing (including shoes)	971.75 tons
Medicines	59.34 tons
Miscellaneous (including soap)	<u>89.41 tons</u>
Total -	4,516.98 tons

Japanese Red Cross Society

Junior Red Cross:

Planning and making arrangements for "Junior Red Cross Leadership Training Centers" has been a major activity of the Junior Red Cross. The Junior Red Cross Advisory Committee made the announcement on 13 May that a final decision had been made regarding the camp sites.

There will be two camps (reference Public Health and Welfare Weekly Bulletin No. 66 for the period 29 March - 4 April), one at Tamano, Okayama Prefecture, between the dates 25 - 31 July and another at Gora, Kanagawa Prefecture, between the dates 15 - 21 August.

The Junior Red Cross Section, National Headquarters, will transmit, on or before 19 May, a letter to all Red Cross Chapters giving general information regarding these Leadership Training Centers. This letter will give information on camp dates, camp sites, student delegate qualifications, financing, and purpose. An English translation of this letter will be inclosed in the next issue of the Public Health and Welfare Weekly Bulletin.

Junior Red Cross enrollment supplies (certificates, badges and cards) have been sent to all Red Cross Chapters in an amount to cover minimum requirements: Chapters may receive additional supplies, as needed, by initiating a request through the National Headquarters, Japanese Red Cross.

Volunteer Services:

The National Committee on Volunteer Services has held four meetings during the week, beginning 9 May, for the purpose of drafting Volunteer Service Manuals. Manuals are being prepared to cover the following Volunteer Service projects: Children's Institutions, Hospitals, Blind Institutions, Parks and Playgrounds. Considerable time will elapse before the manuals will be completed and ready for distribution.

Volunteer Service Information Letter No. 1 (English translation) was inclosed in Public Health and Welfare Weekly Bulletin No. 70 (for the period 26 April - 2 May). Letter No. II, subject: "Procedure for Initiating the Volunteer Service Program in all Chapters" (English translation) is inclosed in this Bulletin (Inclosure 1) as a matter of interest, information and guidance to Military Government Officers.

Public Assistance Fund Allocations to Prefectures

As the result of conferences between SCAP Sections and the Ministries of Welfare and Finance, the following plan has been approved to alleviate the problem of late arrival of Public Assistance funds in cities, towns and villages. It must be noted, however, that this plan cannot go into effect until formal approval, by the Diet, of the budget for this fiscal year. At present the Diet is approving the budget on a month by month basis only, and funds will necessarily continue to arrive late.

Restricted

Restricted

Upon final approval of the budget by the Diet, the Ministry of Welfare will prepare and submit to the Ministry of Finance its prefectural allocation requests 30 days in advance of the month concerned. The Ministry of Finance will approve the allocations, and funds should then reach prefectures within five days and should reach cities, towns and villages in an additional 10 to 15 days. Prefecture governors and heads of cities, towns and villages should be reminded that prompt allocations of their portions of the funds will make certain that assistance can be delivered to the individuals concerned, by the first of each month.

Japanese officials pointed out that although Public Assistance funds sent to prefectures for these purposes were supposedly earmarked, governors often yielded to pressures from other governmental departments and "borrowed" Public Assistance funds temporarily for their functions. Military Government Team Commanders should ascertain that such action does not delay funds reaching cities, towns and villages in the future.

It is also recognized that fiscal and statistical data reaching the Ministry of Welfare is neither adequate nor reliable. The Ministry of Welfare will attempt to correct these deficiencies during this fiscal year.

Disaster Relief

When a disaster occurs it is not uncommon for large crowds to gather to watch the excitement. (Relief work is impeded by spectators)

To guard against this problem, the Japanese Government has been requested to issue instructions to all Prefectural Governors to include in their disaster plans adequate provisions for the control of traffic in time of disaster.

Control of traffic should include roping off strategic areas during fires and other calamities so as to give Fire Departments and other authorized disaster relief agencies full opportunity to conduct their relief activities with the minimum of interference.

Military Government Officers should determine through their normal surveillance of Japanese Disaster Plans that such steps as are necessary be taken to insure that adequate traffic control measures are included in prefectural disaster relief plans.

SECTION II

VETERINARY AFFAIRS DIVISION

Animal Disease Report

The following outbreak of diseases was reported by the Ministry of Agriculture and Forestry for the period 8 - 14 May.

<u>Prefecture</u>	<u>Disease</u>	<u>No. of Cases</u>
Gumma	Swine erysipelas	1
Kagoshima	Swine erysipelas	1
Iwate	Swine plague	15
Iwate	Swine erysipelas	16

NOTE: The Nishigahara Laboratory has dispatched serum and vaccine to Iwate to check this outbreak.

A representative of Public Health and Welfare, SCAP investigated Japanese veterinary activities in Hokkaido. The dairy industry in Hokkaido must be preserved, and definite action at national level is being inaugurated, toward

Restricted

Restricted

stimulation, to realize the minimum health benefits from milk. It was found that considerable blackmarket activities sidestep all sanitary and public health regulations and are upsetting the legal distribution plan for the proper handling of pasteurized milk and milk products.

SECTION III

NURSING AFFAIRS DIVISION

Model Demonstration School of Nursing

The Konodai National Hospital at Ichikawa will be used for psychiatric affiliation for student nurses beginning 15 June. The nurses will be sent in groups of ten and will remain for two weeks. This rotation will take approximately five months for the 3rd year students to complete their affiliation. The students are to receive lectures in clinical psychiatry as well as instructions and experience in various types of psychiatric nursing and will attend ward rounds and staff meetings.

The graduate and student nurses will wear the same style of cap beginning 17 May. Graduates will wear the small Red Cross emblem to distinguish them from students.

Miss Iizuka has been officially appointed Superintendent of Nurses and Director of Nursing Education of the Red Cross School of Nursing.

Midwifery

The fourth in a series of midwifery lectures was given in Nagano. There were 208 midwives enrolled in this 10 day course. Definite goals were set up for improvement of maternity care. The Japanese doctors were very interested and cooperative in this area.

SECTION IV

SUPPLY DIVISION

Distribution

A total of 4,073 pieces of dusting and spraying equipment were distributed to 13 prefectures during the period 2 - 8 May, under the direction of the Ministry of Welfare, as follows:

<u>Prefecture</u>	<u>DDT Duster</u>	<u>Knapsack Sprayer</u>	<u>Semiautomatic Sprayer</u>	<u>Hand Sprayer</u>
Iwate	192	0	0	24

Reference is made to detailed tabulation of distribution of diphtheria toxoid to the various prefectures during the month of March published in the previous issue of the Weekly Bulletin. Revised requirements have been submitted to the Ministry of Welfare by 22 prefectures. These changes are listed below, and the quantities indicated should be substituted for those published last week.

Revised Requirements for Diphtheria Toxoid

(Unit: cc)

Hokkaido	1,047,500	Nagano	280,000
Aomori	160,000	Gifu	100,000
Iwate	140,000	Shizuoka	291,460
Miyagi	151,900	Aichi	200,000
Fukushima	310,000	Mie	200,000
Ibaraki	405,000	Shiga	200,000
Chiba	340,000	Kyoto	332,100
Kanagawa	202,040	Osaka	608,000
Niigata	465,180	Hyogo	159,000
Fukui	108,000	Nara	100,000
Yamanashi	157,700	Ehime	350,000

The plan of distribution of pyrethrum emulsion for the 1948 season, for use in insect control, has been formulated by the Ministry of Welfare. A total of 382,800 gallons will be made available, packaged in 50-gallon drums. This emulsion is to be diluted 30 times, making a total of 11,484,000 gallons of finished insecticide. The allocations are listed below. The quantities to be shipped to each prefecture were based on calculations by the Ministry of Welfare on a population basis, modified to meet as nearly as possible the individual requirements as submitted by the prefectures.

Information on shipments to the prefectures which are expected to begin in the immediate future will be furnished in future issues of the Weekly Bulletin.

Production

A total of 7,673 pieces of the various types of DDT dusting and spraying equipment for mosquito and fly control programs was produced during the period 2 - 8 May. Large inventory stocks remain on hand to meet all requirements.

A total of 66,712 lbs. of 10% DDT dust, 68,950 gallons of 5% DDT residual effect spray and 22,750 vials of typhus vaccine were distributed during the period 2 - 8 May. At the same time, a total of 40,000 lbs. of 10% DDT dust, 62,600 gallons of 5% DDT residual effect spray, and 22,122 vials of typhus vaccine were received from the manufacturing plants. A total of 3,748,608 lbs. of 10% DDT dust, 366,987 gallons of 5% DDT residual effect spray, and 130,979 vials of typhus vaccine represents total stocks on hand in wholesale houses of the Ministry of Welfare as of 8 May.

A breakdown of fuel allocation (standard coal and lignite), by prefectures, for use in those hospitals attached to Universities, Medical Colleges, and other educational institutions under the jurisdiction of the Ministry of Education, for April, May and June, 1948, is included in Inclosure II. Ministry of Education officials mailed allocation tickets directly to the hospitals concerned on 17 April. (Unit: Ton).

Cognizance has been taken of the approaching season of warm weather and accompanying increased prevalence of mosquitoes, flies, and other insects. To implement scheduled mosquito and fly control programs in 1948, a detailed study has been made of national requirements of wire screening materials to be used in equipping public sanitary facilities, slaughter houses and dairies, national and private hospitals, health centers, welfare institutions, etc. Further announcements will be made shortly in future issues of this Bulletin.

SECTION V

NARCOTIC CONTROL DIVISION

The draft of the Narcotic Control Law approved by the Cabinet 7 May has a provision under which narcotic addicts will be committed to designated institutions for a cure.

Restricted

Restricted

An interesting example of an investigation which points to the need of such a provision in the law, is the case of a Nisei with dual citizenship who has been addicted to narcotics since 1942.

This person, who developed a high tolerance to narcotic injections of Morphine, on three occasions tried voluntary cures at institutions, ranging from 25 days on the first occasion to 15 and 10 days on the following occasions. The successively shorter periods show the futility of voluntary treatment of an addict who has lost the power of self control.

Of three licensed physicians apprehended during the course of this investigation for supplying the addict with narcotics, the investigation disclosed that one physician has been a narcotic addict since 1913.

SECTION VI

PREVENTIVE MEDICINE DIVISION

Epidemic of Infectious Diarrhea

Investigations in Niigata, Saitama and Gumma prefectures have brought to light an epidemic of infectious diarrhea, etiology not yet firmly established, which began in January and has extended into May with new cases and foci still developing. Bacteriological findings, for the most part negative for pathogens, have been inconclusive. Presumptive evidence indicates a virus as the causative agent in the Niigata area, studies are still underway. Since the period of illness is in most instances brief, it has been difficult to obtain sufficient fresh material, vomitus and stools, for study. For satisfactory virus study the fresh material should be immediately frozen with salted ice, or dry ice, with complete bacteriological studies performed on samples of the same material prior to freezing. In the Saitama-Gumma-Tochigi area the cultures distributed for field rodent extermination have been suspected and their further use for such purpose has been ordered discontinued. *Salmonella typhi murii* was cultured from one human case of infectious diarrhea with symptoms apparently typical of this epidemic.

Initial reporting has been generally poor. Private physicians are usually aware of many more cases than are reported to health authorities through usual channels, and a house-to-house survey in an affected village ordinarily multiplies case-numbers many fold. Funerals and weddings with their attendant feasts have in certain localities resulted in clusters of new cases.

In general, symptoms consist of a sudden onset of nausea, diarrhea and vomiting with little or no fever, from three to five days following exposure. Stools are usually watery with no blood or mucous, tending to become green. The vomitus also becomes bile colored. Recovery in two or three days is the rule, but a number of deaths have occurred among old people. All possible leads should be followed in obtaining complete epidemiological information, with inquiry to finding the extent of hitherto unreported illness. The term "infectious diarrhea" has been adopted by Japanese health authorities as a provisional name for this epidemic illness.

SECTION VII

MEDICAL SERVICES DIVISION

Civilian Hospital Strength Report for the week ending 16 April shows a total of 3,472 hospitals with bed capacity of 209,085, of which 101,051 were occupied. During this period, 311,752 out-patient treatments were rendered.

Restricted

Restricted

Civilian Hospital Strength Report for the week ending 23 April shows a total of 3,499 hospitals with bed capacity of 210,237, of which 100,843 were occupied. During this period, 292,110 out-patient treatments were rendered.

SECTION VIII

SOCIAL SECURITY DIVISION

General

Pending the current revision of social insurance statistical reporting requirements and procedures, an effort is being made to assemble and digest all pertinent statistics now available. Owing to a number of gaps in exact data, estimates have to be resorted to in several instances.

The subsequent selected data are believed to reflect coverage and over-all finances with reasonable accuracy. These totals include both the programs covering workers in private industry (Health Insurance, Welfare Pension Insurance, Seamen's Insurance, and National Health Insurance) and those covering government workers (Government Pension Insurance and Government Mutual Aid schemes) in operation in the given years.

1. Total coverage under the Japanese social insurances before, during, and after the war:

(In millions of yen)

	Primary <u>Insured</u>	Dependents (<u>estimated</u>)	<u>Total</u>
Fiscal year 1941 (last pre-war year)	8.8	24.2	33.0
Fiscal year 1944 (highest point during the war)	19.0	49.4	68.4
Fiscal year 1946 (first complete post-war year)	12.3	39.8	52.1

2. Total collections for social insurances in the fiscal year 1946:

(In millions of yen)

Contributions	2,999
National subsidies	544
Prefectural subsidies (estimated)	<u>16</u>
Total -	3,559

3. Total disbursements under the several social insurance programs in the fiscal year 1946:

(In millions of yen)

Temporary disability and medical care	1,298
Health and welfare services	77
Retirement and old-age, survivors' and funeral benefits	296
Capital outlay (estimated in part)	271
Administrative expenses (estimated in part)	<u>238</u>
Total -	2,180

Restricted

Restricted

4. Total reserves of all the social insurances combined at the end of the fiscal year 1946:

(In millions of yen)

Total: 4,203

As the current drive for more complete and more accurate reporting, both locally and by the Ministry of Welfare, is effective, more recent and detailed annual summaries as well as monthly operations reports for the several programs should become available.

National Health Insurance

A number of inquiries have been received as to how the National Health Insurance associations will continue to conduct their public health activities in conjunction with the newly organized public health program. The reorganized program now comes under the direct supervision of the district public health officer. Therefore, participation by the associations or those juridical persons exercising the National Health Insurance in the public health program is a responsibility of the district health officer. In the early history of National Health Insurance many associations independently conducted their own public health programs which were found to be lacking in coordination and uniformity. The new public health program is designed to bring about uniformity and efficiency on a national scale with increased local responsibility in complying with minimum standards. This revised procedure needs dissemination and clarification in many National Health Insurance associations.

DIGEST OF WEEKLY REPORT OF COMMUNICABLE DISEASES
IN JAPAN FOR THE WEEK ENDED 8 May 1948

During the nineteenth week ended 8 May 1948, there were reported 13,326 cases of communicable disease compared with 12,422 in the previous week. Only Yamanashi Prefecture (compared with four prefectures last week) failed to submit a report on the 12 acute communicable diseases. Only Niigata Prefecture (compared with two previously) did not report on tuberculosis, pneumonia, measles, whooping cough and influenza.

Nearly 94 percent (12,520) of all cases reported for the 17 diseases included in this report were due to tuberculosis, pneumonia, measles, whooping cough and influenza. Tuberculosis cases (7,754) were nearly 16 percent higher than in the preceding week (6,691) but were 10 percent less than in the nineteenth week of 1947 (8,603). The current and cumulative case rates were 519.2 and 418.8 respectively.

Pneumonia cases continued to decline. The current number (2,040) was approximately 14 percent less than previously (2,373). It was less than a third of the figure (6,213) for the same week of 1947. The current and cumulative case rates were 136.6 and 254.9 respectively.

Measles increased for the third consecutive week. Cases rose approximately 5 percent, from 1,834 to 1,934. This was, however, less than a fourth of the number (8,599) in the corresponding week of 1947. The current and cumulative case rates were 129.5 and 82.4 respectively.

Whooping cough showed little change. There were 720 cases currently compared with 713 in the preceding week. Nearly 7 times as many cases (4,892) were reported in the nineteenth week of 1947. The current and cumulative case rates were 48.2 and 50.8 respectively.

Influenza cases (72) were exactly the same as reported last week. This was nearly 80 percent less than the number (339) reported in the corresponding period of 1947. The current and cumulative case rates were 4.8 and 6.6 respectively.

The remaining 12 acute communicable diseases accounted for 806 cases and 71 deaths compared with 739 cases and 73 deaths in the preceding week.

The reported number of diphtheria cases increased from 296 to 306. If all prefectural reports had been received in both weeks, however, the number for the previous week would have been somewhat higher than the current figure. There were 27 deaths reported currently compared with 25 previously. The number of cases this week was nearly 60 percent less than in the corresponding week of 1947 (722) and 65 percent less than in the nineteenth week of 1946 (879). The current and cumulative case rates were 20.5 and 25.7 respectively. Corresponding death rates were 1.8 and 2.6.

The reported number of cases of dysentery (122) was approximately 48 percent higher than in the preceding week (82) but it should be noted that the percentage increase would have been only about 30 percent if all reports had been received last week. Increases were recorded in 18 prefectures and decreases in 12. Deaths (21) were only slightly higher than previously (17). The current number of cases was 30 percent less than that (178) for the same period of 1947 and more than 55 percent lower than the number (280) reported in the corresponding week of 1946. The current and cumulative case rates were 8.2 and 3.8 respectively. Corresponding death rates were 1.4 and 0.8.

There was a 22 percent increase in the number of typhoid fever cases reported, from 125 to 152. The percentage increase would have been about half the amount shown, however, if all reports had been received for the preceding week. Deaths dropped from 17 to 14. Increases of 1 to 6 cases were reported in 17 prefectures and small decreases in 14 prefectures. The total number reported currently was 37 percent less than in the nineteenth week of 1947 (242) and 83 percent lower than the figure (895) for the corresponding week of 1946. The current and cumulative case rates were 10.2 and 7.2 respectively. Both the corresponding death rates were 0.9.

Paratyphoid fever cases (66) were approximately 15 percent higher than previously (57). There was only 1 death compared with 3 in the preceding week. As previously, nearly 45 percent (29) of all cases were reported in Tokyo-to and from 1 to 7 cases were reported in 18 additional prefectures. Increases of 1 to 5 cases were registered in 10 prefectures and small decreases in 11. The total this week was more than 25 percent higher than the number (52) reported in the corresponding week of 1947 but was nearly 60 percent less than in the nineteenth week of 1946 (158). The current and cumulative case rates were 4.4 and 2.4 respectively. Both the current and cumulative death rates were 0.1.

Three cases of smallpox were reported this week compared with 1 previously. These cases were in Chiba (2) and Hiroshima (1) Prefectures. No deaths have been reported this year. In the corresponding weeks of 1947 and 1946 there were 25 and 531 cases respectively. The current and cumulative case rates were 0.2 and 0.1 respectively.

There were 9 cases of typhus fever this week compared with 11 in the preceding week. No deaths have been reported for three weeks. More than twice the current total of cases was reported in the nineteenth week of 1947 (20) and in the corresponding week of 1946 there were 1,833 cases. The current and cumulative case rates were 0.6 and 1.5 respectively. The cumulative death rate was 0.1.

Malaria cases declined 35 percent, from 83 to 54. Two deaths were reported compared with none previously. Only Shiga Prefecture reported a sizeable number (21) of cases. Nineteen additional prefectures had from 1 to 4 cases each. There were decreases in 17 prefectures and small increases in 12. The total was only 27 percent of the number (202) reported in the corresponding week of 1947. The current and cumulative case rates were 3.6 and 4.0 respectively. The current death rate was 0.1 and the cumulative rate was less than 0.1.

There was little change in scarlet fever with 57 cases and no deaths reported currently compared with 54 cases and 2 deaths in the previous week. The current total was 23 percent less than in the same week of 1947 (74) but approximately 35 percent higher than in the nineteenth week of 1946 (42). The current and cumulative case rates were 3.6 and 3.5 respectively. The cumulative death rates was less than 0.1.

Epidemic meningitis cases increased from 30 to 37 but deaths declined from 9 to 6. Cases were reported in 16 prefectures compared with 12 in the preceding week. Increases were recorded in 12 prefectures and decreases in 8. The current total was less than a third of the number (115) reported in the same week of 1947 and about the same as that (34) in the corresponding period of 1946. The current and cumulative case rates were 2.5 and 3.2 respectively. Corresponding death rates were 0.4 and 0.8.

No suspect Japanese "B" encephalitis has been reported besides the 1 case in the week ended 24 April nor was there any in the corresponding period of 1947. The cumulative case rate was less than 0.1.

There continued to be no cholera or plague.

The current and cumulative number of cases of syphilis were 4,402 and 86,277 respectively; for gonorrhea, 5,011 and 93,971; for chancroid, 815 and 17,709. The totals this week were higher than in the preceding week for all three venereal diseases. The current number of cases of syphilis and gonorrhea were also higher than in the corresponding week of 1947 when there were reported 3,347 cases of syphilis and 4,482 cases of gonorrhea. The number of chancroid cases (824) in the nineteenth week of 1947 was about the same as currently. The current and cumulative case rates for each of these diseases were: syphilis, 294.7 and 304.0 respectively; gonorrhea, 335.5 and 331.1; for chancroid, 54.6 and 62.4.

NUMBER OF CASES AND CASE RATES OF
VENEREAL DISEASES IN JAPAN FOR
COMPARABLE PERIODS, 1946, 1947, 1948

DISEASES	WEEK ENDING			CUMULATIVE NUMBER FOR		
	8 May 1948	10 May 1947	11 May 1946	FIRST 19 WEEKS		
				1948	1947	1946
<u>NUMBER</u>						
CHANCROID	815	824	926	17,709	15,001	8,152
GONORRHEA	5,011	4,482	2,772	93,971	68,044	34,081
SYPHILIS	4,402	3,347	2,029	86,277	46,318	19,775
<u>RATES</u>						
CHANCROID	54.6	55.1	64.1	62.4	52.8	29.7
GONORRHEA	335.5	299.6	192.0	331.1	239.4	124.2
SYPHILIS	294.7	223.7	140.5	304.0	163.0	72.1

- NOTE: 1. There were no cases or deaths reported for plague.
2. Rates are the number of cases or deaths per 100,000 population, enumerated on 1 October 1947, and are computed on an annual basis.
3. A dash (-) indicates that no cases or deaths were reported and that the case or death rate was zero.
4. A rate of 0.0 indicates that there were some cases or deaths but that the rate was less than 0.1.
5. "NA" indicates data are not available.
6. * Cumulative figures adjusted for delayed and corrected reports.
7. "NR" indicates no report was received.
